

Red Hat Virtualization or AzureStack/Local

	<u>Red Hat OpenShift</u>	<u>Azure Local</u>
Hardware	Choice of <u>certified hardware</u> Customer can re-use existing hardware.	<u>Certified hardware</u> Customer cannot re-use existing hardware.
Software	OpenShift with Virtualization	Prescribed Azure services
Management	ACM and Ansible	Azure Console
Disconnected	Yes	No
Containers	OpenShift based on Kubernetes	AKS distro of Kubernetes
Virtual Machines	OpenShift Virt operator (Kubevirt)	Migrated to HyperV
Linux guest	RHEL included	Azure Linux, RHEL, SUSE, Ubuntu
Windows guest	Not included	Not included
Migration tool	<u>MTV</u>	<u>VMM</u> ; <u>Starwind</u>

For customers that strongly prefer an appliance:

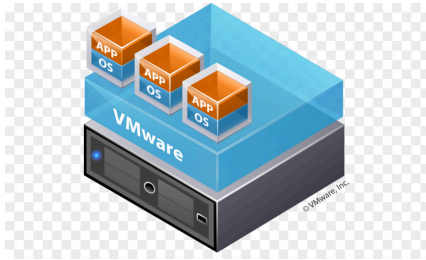

OpenShift is available in appliance form factor from DELL APEX, IBM Fusion and HPE Greenlake

1. Do you need a solution that supports your entire hybrid multicloud environment?
2. Are you concerned about the risk of vendor lock, and losing the ability to choose which vendor to work with?
3. Are you using data stores, databases and data warehouses from multiple providers in cloud and/or on premise?

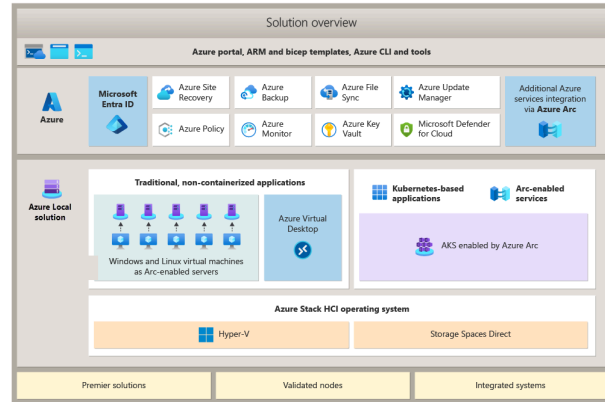

Migration from VMware to Azure Local

Nutanix

1. An HCI solution (virtualization and storage) in pre-defined configurations.
2. Limited modernization to containers.
3. Virtual machine is the primary workload
4. Microsoft centric, not open to other technologies.

TO→

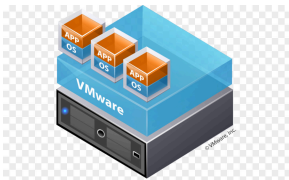

Acquisition + migration cost = Microsoft lock-in platform

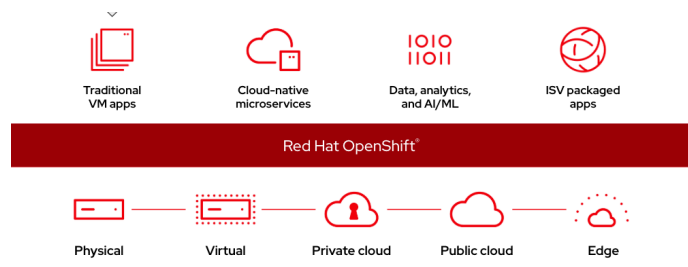

Migration from VMware to OpenShift

OpenShift

1. Stepping stone to an Application Platform.
2. Opportunity to modernize to containers.
3. Virtual machines as first class citizens
4. Includes AI platform (SKU add-on)

TO→

Acquisition + migration cost = Modern app platform with VMs
