App Platform TDP

Position the Sales Tactics

	Optimize & sustain traditional applications	DevX & platform engineering to build modern applications	Secure the software supply chain
Benefits	Reduce risk, Stay competitive, Increase scalability, Improve Quality	Standardize tools and processes, eliminate inefficiencies, boost team productivity	Strengthen security, ensure compliance, mitigate risks
Likely Key Stakeholders	CIOs and IT leaders, Application development and operations teams, DevOps and cloud architects	DevOps Managers and Platform Engineers, Development Team Leads, CIOs/CTOs	IT Security Manager, App Dev Leader, LoB, ITDM, platform engineers
Discussion Topics	Legacy systems, outdated technology, risk mitigation, security concerns, scalability issues, cloud adoption, hybrid cloud strategy, slow to market, need to be more agile, modernize applications, move to cloud-native.	Onboarding challenges, inconsistent tools, developer efficiency, hybrid cloud management, time-to-market delays, complexity in Kubernetes environments.	Software security vulnerabilities, open source risk management, compliance requirements, supply chain security, platform security and integrity, regulatory audits, third-party library risks.

Application Platform: Sales Tactics

Accelerate innovation and improve developer productivity with a consistent platform across hybrid environments.

Sales Tactic

Optimize + sustain traditional applications

DevX + platform engineering to build modern applications

Secure the software supply chain

ASSESS

Large portfolio of legacy apps,
app debt, slow releases, rising
maintenance

Developer productivity issues, long lead times, poor developer experience

Software supply-chain risk,
SBOM gaps, CI/CD security
concerns

MEASURE

Efficiency KPIs

Innovation KPIs

Risk KPIs

ADVANCE

Educate customers on the continued value Red Hat's traditional middleware portfolio provides, the importance of being on more current versions, and how to maintain support on older versions via ELS.

Pitch the value of continued support of Red Hat middleware via ELS.

Guide upgrades of middleware to the latest versions, with or without JUMP.

Upsell to modernization by replatforming and refactoring applications via OpenShift's cloud native runtimes and products.

Educate customers the importance of platform engineering to developer experience and what an Application Platform is and why they need one.
Pitch the value of Red Hat's Application Platform against DIY application platforms and DIY IDPs.
Pitch the value of the foundational Application Platform in OpenShift and enhanced capabilities of ADS.
Position OpenShift and ADS as an Application Platform, and standalone RHDH for OpenShift losses to xKS; big battle loss but capture a small battle win.
Execute templated demos and POCs of a fully integrated software factory.
Drive ARO/ROSA and OSD to ROSA conversions for customers on hyperscalers
Partner for joint sell-with and execution with GSIs, including adoption.
Promote activities such as app dev roadshows leveraging MTA, GitOps, Pipelines, Serverless, and Mesh
Focus on success planning via customer success/consulting activities to ensure the customer is using the Red Hat Application Platform the right way, not falling back to container management.
Identify intelligent applications to cross-sell into the [Red Hat AI Platform](#) sales play

Educate customers on the need to secure and add trust to their software supply chain

Pitch the value of Red Hat Trusted Software Supply Chain (TSSC) to further complete the OpenShift Application Platform

Position TSSC positioning for OpenShift loss to xKS; big battle loss but capture a small battle win

Focus on success planning via customer success/consulting activities to ensure the customer is using TSSC the right way

V1.0
20260212

Application Platform: Sales Tactics

Accelerate innovation and improve developer productivity with a consistent platform across hybrid environments.

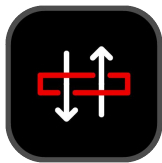

Sales Tactic

Overview of Solutions & How to use the resources

- Customer Challenge
- Red Hat Solution
- Why Should Account Care
- What is the Business Value for the Customer + Potential Outcomes
- Customer Personas
- Target Customer Profile
- Resources (including Brief Intro Video)
- Appendix - Additional **Optional** Content with Index

Quick Overview of Target Solutions

A guide to navigating the solution resources at your own pace

01. Customer Challenge/Red Hat Solution

Addressing core challenges with targeted Red Hat software solutions.

02. Why It Matters

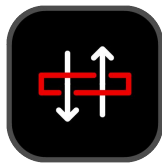

Business value for both the account team and the customer.

03. Personas/Profile

Identifying target customer attributes and understanding the key stakeholders

04. Resources/Appendix

Supporting resources, intro videos, **next steps**, and optional deep-dive content.

Java Modernization

Upgrade or ELS ~_(\ツ)/~

Confidential

01. CHALLENGE / SOLUTION

Java workloads: Top Workloads on Red Hat Platforms
EAP7 EOL / OpenJDK 8 EOL in November

UPGRADE? JUMP Program to help
NO?? ELS

02. WHY IT MATTERS

Red Hat: Large Base/Addl. ARR for ELS/ACV+Services for JUMP

Customer: Continued Support / Plan for Future / Security

03. ATTRIBUTES / PERSONAS

OpenJDK: RHEL, OpenJDK, OpenShift, App Services SKUs
EAP: Running EAP 7 but NO ELS

Personas: ITDMs, App Dev Managers, Enterprise Architects,
Operating Systems/OpenShift Admins

DOES LIST EXIST? YES (READ FINE PRINT)

04. RESOURCES / APPENDIX

Comprehensive list of resources and next steps
Discovery Questions, intro videos, Slightly deeper-dives, etc.

Refer to Appendix for details

Java apps: TOP workloads on RHEL and OpenShift

However, customers in risk of running EOL versions, losing support (**security vulnerability**)

JBoss EAP 7 (EOL June 30, 2025)

Customer Challenge

- 85%+ of EAP customers are running v6 or 7 across hundreds of accounts
- Full support ended June 30, 2025. Migrate to EAP 8 or purchase retroactive ELS
- **OpenJDK is a requirement for JBoss EAP*

Red Hat Build of OpenJDK EOL

Customer Challenge

- Applications running on unsupported Java versions or losing support soon
- OpenJDK 8 support ends Nov 30, 2026; ELS required for continued support
- OpenJDK 11 full support ended on Oct 31, 2024

Upgrade or ELS

Red Hat Solution

Our preference is for customers to upgrade to supported EAP or OpenJDK versions.

- **Red Hat Migration Tooling:** MTA + Developer Lightspeed available to facilitate migration.
- **JUMP (Java Upgrade & Modernization Program):** Opportunity to discount ELS costs with equivalent modernization services.

*If not ready to migrate, customers can continue support by purchasing **Extended Life Cycle Support (ELS)**.*

How Customers Access Entitlements

OpenJDK

- RHEL Subscription
- Middleware subscription (limited to MW product use, see speaker notes)
- OpenShift subscription (via RHEL and UBI images)
- OpenJDK subscription (primarily Windows/standardization)

EAP

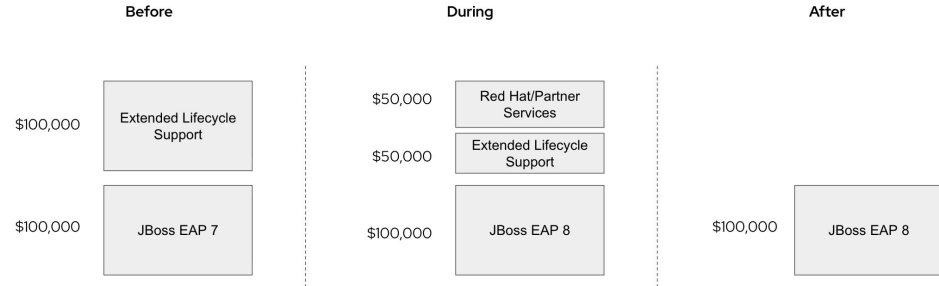

1. Red Hat Application Foundations
2. Red Hat Runtimes
3. **Grandfathered EAP SKUs (see speaker notes)**

What is JUMP?

The [Java Upgrade and Modernization Program](#) (JUMP) exists to accelerate modernization of Runtimes and Application Services customers by permitting discounting of Extended Lifecycle Support (ELS) when an equivalent amount of Red Hat Services are purchased with the intention of using Red Hat Services spending to modernize the Runtimes and Application Services installation.

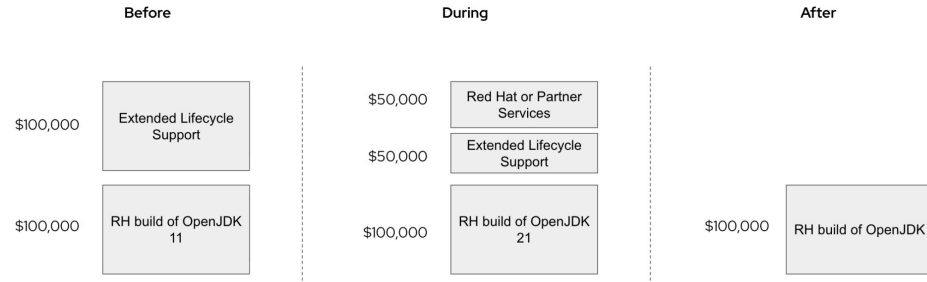

JUMP Example

CONFIDENTIAL designator

JUMP Example

CONFIDENTIAL designator

Why Should the Account Care?

"EAP 7 ELS already began and OpenJDK ELS begins Dec 1st, start the conversation today"

Large JBoss EAP Install Base

JBoss EAP is a proven Application Server for running critical workloads across industries.

Running Supported Software is Critical

400M ARR as of 2024

1M+

RHEL servers w/ OpenJDK 8 workloads

Java is **the top workload** on RHEL according to reporting from Groknet

7k

RHEL customers running OpenJDK 8

Red Hat customers expect 8–9 years of OpenJDK support, and the difficulty of upgrading from OpenJDK 8 often delays migration

99%

of RHEL customers are **NOT** entitled to OpenJDK 8 ELS

99% of customers are covered by RHEL/OpenShift entitlements, yet many will be surprised to need a separate ELS SKU to keep support.

Potential Access to Developer Teams/Leader

Direct access to customer developer community/leaders puts Red Hat in a situation to influence their modernization direction/decisions and lead to more opportunities to cross-sell/upsell

\$\$

Opportunity for additional revenue via ELS or JUMP

Additional Revenue via Modernization Activities via JUMP or ELS add-on

In 2026, **We have a >\$50M ACV+ opportunity in ELS** across 5,000+ Red Hat customers in Java modernization, retention, and growth

Why would I be interested in buying ELS?

Modernization roadblocks

Not always possible or desirable for organizations to update to the latest versions due to time/budget constraints, lack of in-house skills, etc.

Ongoing connection

Provides continuous access to product downloads, documentation, knowledgebase articles, and access to Red Hat support channels.

Support requirements

Delivers certain critical-impact security fixes, selected urgent priority bug fixes, and troubleshooting guidance that can differentiate from self-support option and may be needed for regulatory compliance.

Future planning

Allows customers to strategically plan for software maintenance, upgrades, and peace of mind regarding long-lived product support.

Allow developers to **quickly and securely deliver applications to production** and Operations enforce **security and compliance**

Improve Dev Productivity & Software Delivery

- **Reducing developer churn and onboarding time**
- **Standardizing tools, resources, and services**
- **Improving team efficiency**
- **Managing infrastructure costs**

Enhance Software Supply Chain Security

- **Managing secure software supply chain risks**
- **Automated Security Scanning**
- **Artifact Signing and Compliance**

*Enabling customers to balance Production,
Innovation & Security*

Red Hat

Why should account care?

Accelerates OpenShift Adoption:

- Helps customers be more successful delivering and securing applications on OpenShift → more workloads → Increased OpenShift Consumption
- It runs on OpenShift and **consumes OCP CPU subs**

Increased ARR and ACV+Services:

- Red Hat Advanced Developer Suite is an add-on SKU to OpenShift
- There is potential to attach Services to RHADS deals

How Red Hat Drives Business Value For Customer

BUSINESS OBJECTIVES

SOLUTION ENABLERS

BUSINESS IMPACT

Cost Efficiency

Reduce Cognitive Load

- Easily implement & maintain DevOps practices, CI/CD pipeline & application release with integrated automated workflows
- Create, maintain, and search technical documentation alongside code seamlessly
- Enable new team members to quickly spin up new projects without building from scratch through software templates
- Reduce the frequency of support requests related to common issues, repetitive tasks

Effort on Platform engineering

Developer Onboarding time

Help Desk Ticket volume

Revenue Growth

Drive Innovation and Delight Customers

- Accelerate the secure and iterative development and delivery of cloud-native applications across the hybrid and multi-cloud, including edge
- Drive revenue and innovation with ability to quickly experiment new features in existing applications
- Increase platform stability to drive customer retention
- Adopt cloud-native and DevSecOps approaches to create modular, adaptable, microservices based applications and data services

Improve Developer Productivity

Development velocity (New Features)

Faster Time to Market

Risk Mitigation

Secure and compliant development

- Reduce downtime by delivering high quality software through streamlined developer workflows against organization's best practices
- Reduce supply chain security risks across the software development lifecycle
- Automate software artifact signing and verification, ensuring cryptographic integrity and a trusted path to deployment
- Enable end-to-end provenance with an immutable audit trail, proactive risk monitoring, and policy-based enforcement

Reduce number of unplanned downtimes

Reduce time to resolve unplanned downtimes

Risk of compliance policy violation

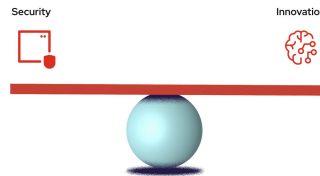

Risk of security breach

Red Hat Advanced Developer Suite

Balance Innovation Productivity, Innovation, Security, y Compliance

01. CHALLENGE / SOLUTION

Dev Onboarding & App Mod Challenges, Increased Security Vulnerabilities, Lack of compliance and policy enforecemet

RHADS Enables Increased Developer Productivity, Automates Provisioning, Supply Chain Security & Compliance

02. WHY IT MATTERS

Red Hat: Accelerates OpenShift Adoption = ADDITIONAL SKU= More Consumption \$\$\$ ARR and potential \$\$\$ ACV+Services

Customer: Enable development teams to deliver business value faster; Reduce supply chain security risks across the software development lifecycle

03. ATTRIBUTES / PERSONAS

Adoption Maturity Level: ≥ 3 (OPERATIONAL) w/ Exceptions

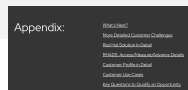

Personas: Security Ops Lead/Platform Engineer/App Dev Mg or Arct and what you might hear from them

DOES LIST EXIST? KINDA (READ FINE PRINT)

04. RESOURCES / APPENDIX

Comprehensive list of resourcces and next steps
Discovery Questions, intro videos, Slightly deeper-dives, etc.

Refer to Appendix for details

Red Hat OpenShift Dev Spaces

Looking to drive more consumption of OpenShift??

01. CHALLENGE / SOLUTION

Onboarding Delays/Environment Mismatch/Expensive Workstations/
OpenShift Dev Spaces

02. WHY IT MATTERS

Red Hat: Leads to increased OpenShift Consumption & Adoption

Customer: Consistent Environments, Eliminate Configuration Drift, Secure Consistent Workspaces

03. ATTRIBUTES / PERSONAS

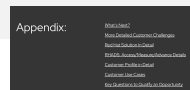

OpenShift Customer with developers developing locally or with Virtual Developer infrastructure

Personas: Security Ops Lead/Platform Engineer/App Dev Mg or Arct

04. RESOURCES / APPENDIX

Comprehensive list of resources and next steps
Discovery Questions, intro videos, Slightly deeper-dives, etc.

Refer to Appendix for details

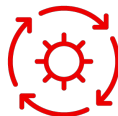

Current Problems with Local Development

Environment Mismatch

Local Workstations are mac or windows based while production is Kubernetes or linux based

Onboarding Delays

Switching to a new project can take days if not weeks due to environment setup

Expensive Workstations

Expensive local workstations along with ever increasing resource needs

Unsecure Workstations

Source code is often stored on unsecured laptops that can be lost, broken, or stolen

VDI is not the answer

Slow, bulky, and expensive while still having many of the same problems as local workstations

Red Hat OpenShift Dev Spaces

What it is

A cloud-based, containerized development environment that provides developers with consistent, pre-configured, and secure workspaces running on OpenShift, eliminating the need for local setup and promoting collaborative, cloud-native development.

Market Drivers

- Alternatives to Broadcom for Developers using VDI
- Colocation of developer IDEs and GPUs for code assistants (Copilot, Cursor, Cline, Continue, Roo, Kiro)
- Desire to meet sovereignty requirements for developer data

Addresses Customer Pains

- Inconsistent developer environments and “works-on-my-machine” issues
- Slow onboarding and setup of developer tools
- Security, control, and governance of dev environments

Why Should you care?

Batteries Included

It is **included with OCP** subscriptions. The customer does NOT have to buy anything new

Leads to **more OpenShift Consumption**: It runs on OpenShift and consumes OCP CPU subs

The **more developers that use it**, the **more OCP CPUs it will consume**

For example - Delta's largest ROSA cluster is for hosting Dev Spaces (1200+ developers)

Globally,

> 70,000 cores on the connected OpenShift fleet are consumed by Red Hat OpenShift Dev Spaces

> 300 customers (7.5% of install base) using Dev Spaces

40 Customers (1% of install base) with 50+ Dev Spaces workspaces in use

\$47,565,000 in OpenShift consumption is from OpenShift Dev Spaces utilization*

If Red Hat were to penetrate into an additional **20% of customers** with similar utilization as today it **could drive an additional \$100M in OpenShift Consumption**

Business Value Map for Red Hat OpenShift Dev Spaces

CONFIDENTIAL Red Hat Associate and
NDA partner use only, no further distribution

BUSINESS OBJECTIVES

SOLUTION ENABLERS

BUSINESS IMPACT

Cost Efficiency

Reduce Cognitive Load

- **Enable developers** to remotely code, run, and test applications using their favorite IDEs with OpenShift Dev Spaces (included in OCP subscription)
- **Compute is executed remotely** on OpenShift cluster which allows for scaling up or down workloads depending on developer activity.
- **Developer environments as code** enabling repeatable consistent environments that allow instant onboarding for new developers while **reducing IT tickets** by standardizing on the same config for all developers

Reduced Compute and Infra Cost

Shortened Developer Onboarding

Reduced Help Desk Tickets

Improved Infrastructure Utilization

Revenue Growth

Drive Innovation and Delight Customers

- **Eradicates "works on my machine"** by running on linux containers which more closely resembles production environments while keeping developer environments consistent, reproducible, and shareable
- **Fully secure code assistant** flow via connecting an assistant running on an airgapped Dev Spaces deployment with a model running on RHOAI
- **Enable developers** to securely run tools such as Podman that may be prohibited on local machines due to elevated privilege requirements

Increased Developer Productivity and Velocity

Reduced time to market

Increased Tool Availability

Risk Mitigation

Secure and compliant development

- **All source code/data** remains on cluster and is not pulled to local machines
- **Isolated sandboxed** environments which minimizes the attack surface for both developers and agentic assistants
- **Air Gapped setup** while pointing developer environments to internally hosted plugin and image registries

Number of Security Incidents

Improved Security and compliance

Red Hat OpenShift Dev Spaces

Looking to drive more consumption of OpenShift??

01. CHALLENGE / SOLUTION

Onboarding Delays/Environment Mismatch/Expensive Workstations/
OpenShift Dev Spaces

03. ATTRIBUTES / PERSONAS

OpenShift Customer with developers developing locally or with Virtual Developer infrastructure

Personas: Security Ops Lead/Platform Engineer/App Dev Mg or Arct

02. WHY IT MATTERS

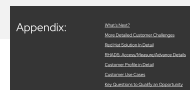

Red Hat: Leads to increased OpenShift Consumption & Adoption

Customer: Consistent Environments, Eliminate Configuration Drift, Secure Consistent Workspaces

04. RESOURCES / APPENDIX

Comprehensive list of resources and next steps
Discovery Questions, intro videos, Slightly deeper-dives, etc.

Refer to Appendix for details

Next Steps... (for this quarter and beyond)..we'll talk about today's activity in a bit

Step 1

Review and Understand Resources Materials

These documents will help CSEs start impactful conversations with executives and tech leaders, ensuring a strong foundation for follow-up meetings.

Step 2

Identify Customers and prospecting personas

Determine, using the guidance/tools in this deck, if a customer is a good target

Identify the decision makers and influencers in your account. Perform a "pre-discovery" conversation with customer if needed

Create an [ALG Task](#) in Red Hat Sales Cloud

Step 3

Determine Next Steps with Account Team

Work with account team to determine next steps on having the conversation with the customer

Work with Specialists and Launch Team to engage customer on technical win

Step 4

Engage with Red Hat Services and/or SAAs

For some solutions, Red Hat Services works with your organization to achieve business goals with tailored Consulting solutions

For engagements that are strictly adoption, leverage the Launch Team

CTA and Resources!

Where to find App Platform ALG Resources

- [INDEX & Why are we doing this?](#)
- [Red Hat Advanced Development Suite](#)
- [Java Modernization/ELS](#)
 - JBoss EAP & OpenJDK Modernization/ELS
- [Red Hat OpenShift Dev Spaces](#)

Today's CSE Activity

Step 1: Pick a Solution
Step 2: Use the deck as a reference (pay attention to Speaker Notes)

Step 3: Are any customers potential targets?

Confidential: Red Hat associates only

JAVA MODERNIZATION

EASY BUTTON 🖱️

- Look at the provided spreadsheet and RHSC report (see speaker notes for detail)

RED HAT ADVANCED DEVELOPER SUITE

- What's your Customer's App Platform Adoption Material Level?
- Have they expressed frustration with migrating apps to OpenShift at scale
- Do they have particular needs around Dev Portals, Signing or Software Bill of Materials?
- Is your customer on the marketing list? (see speaker notes for detail)

RED HAT OPENSIFT DEV SPACES

- Current OpenShift Customer?
- In-house Development Teams?
- Environment mismatch, Developer Onboarding, or Workstation or Security concerns
- Might help to ask Launch team if they've engaged with Customer in the recent past

Step 4: ADD ALG TASK where applicable (see next slide)

How to create a ALG Task in RHSC

Follow these steps to create a TDP ALG Adoption Task:

Open your customer's account page in Red Hat Sales Cloud

The screenshot shows the Red Hat Sales Cloud interface. The main content area displays a list of TDPs under the 'Technical Landscape (Tech Sales)' section. The first TDP, 'Application Platform TDP', is highlighted with a red box and a blue circle labeled '1'. To the right, the 'Actions' tab is active, showing a list of actions. A red box and a blue circle labeled '2' highlight the '+' icon used to add a new action. Below this, a 'New Task' pop-up is displayed, highlighted with a red box and a blue circle labeled '3'. The 'New Task' form contains the following fields:

- Task Information**
 - * Subject**: Red Hat Advanced Developer Suite
 - Due Date Only**: (blank)
 - Technical Activity**: Adoption-Led Growth (highlighted with a yellow star)
 - Related To**: HIG 2026 Account Plan
 - * Assigned To**: Dixon Rochez

- Navigate to the primary Account Plan, select the Scorecard view, and scroll down to the **Technical Landscape (Tech Sales)** section to list all TDPs for this account. Select the TDP that matches the Feature you are logging a Task for
 - Example: **Application Platform TDP**
- To the right side of the screen, select  (2) to add a new **Action** which allows you to create a **Task**.
- You will see a "new task" pop-up displayed. This is highlighted with **blue (1)** in the screenshot to the left.
- Be sure to choose **Adoption-Led Growth** as the Technical Activity. It is the field next to the  in the **blue (3)** highlighted box
- In the Subject line, you will type the Feature Adoption you are referencing with your customer
 - Example: **Red Hat Advanced Developer Suite | EAP | OpenJDK | OpenShift Dev Spaces**
- You may leave the due date BLANK or assign a specific date.
- Ensure your **Name** is listed in the "Assigned To" field starred to the left.
- Once the Task is officially concluded, finalize all field inputs and then mark the Task "Completed". If customer provides an objection that prevents feature adoption, note that in the description.

Launch Deliverables
