

OpenShift Virtualization or Oracle Virtualization.

This deck may be presented in a meeting but **not** emailed outside Red Hat.

Jonathan Gershater Senior PMM

Summary of Oracle Virtualization

- Oracle Virtualization is an Virtualization on Linux offering.
- Product offering is KVM virtualization only, **missing**: AI, cloud service, developer platform, Linux, security, management
- Low if any CNCF contributions to KubeVirt.

Oracle Virtualization may be suitable for existing Oracle customers, that need an alternative to VMware. Oracle Virtualization lacks the modernization options that OpenShift Virtualization offers. Customers adopting Oracle Virtualization would be doing a lift and shift with no gain other than a different Virtualization platform.

OpenShift offers customers choice of hardware, storage, networking and more from a partner ecosystem. A modern container based platform: AI, security and management round out a comprehensive cloud native platform for VMs, containers and serverless at the Edge, on-premise or managed service in the cloud.

At a glance, OpenShift & Oracle Virtualization

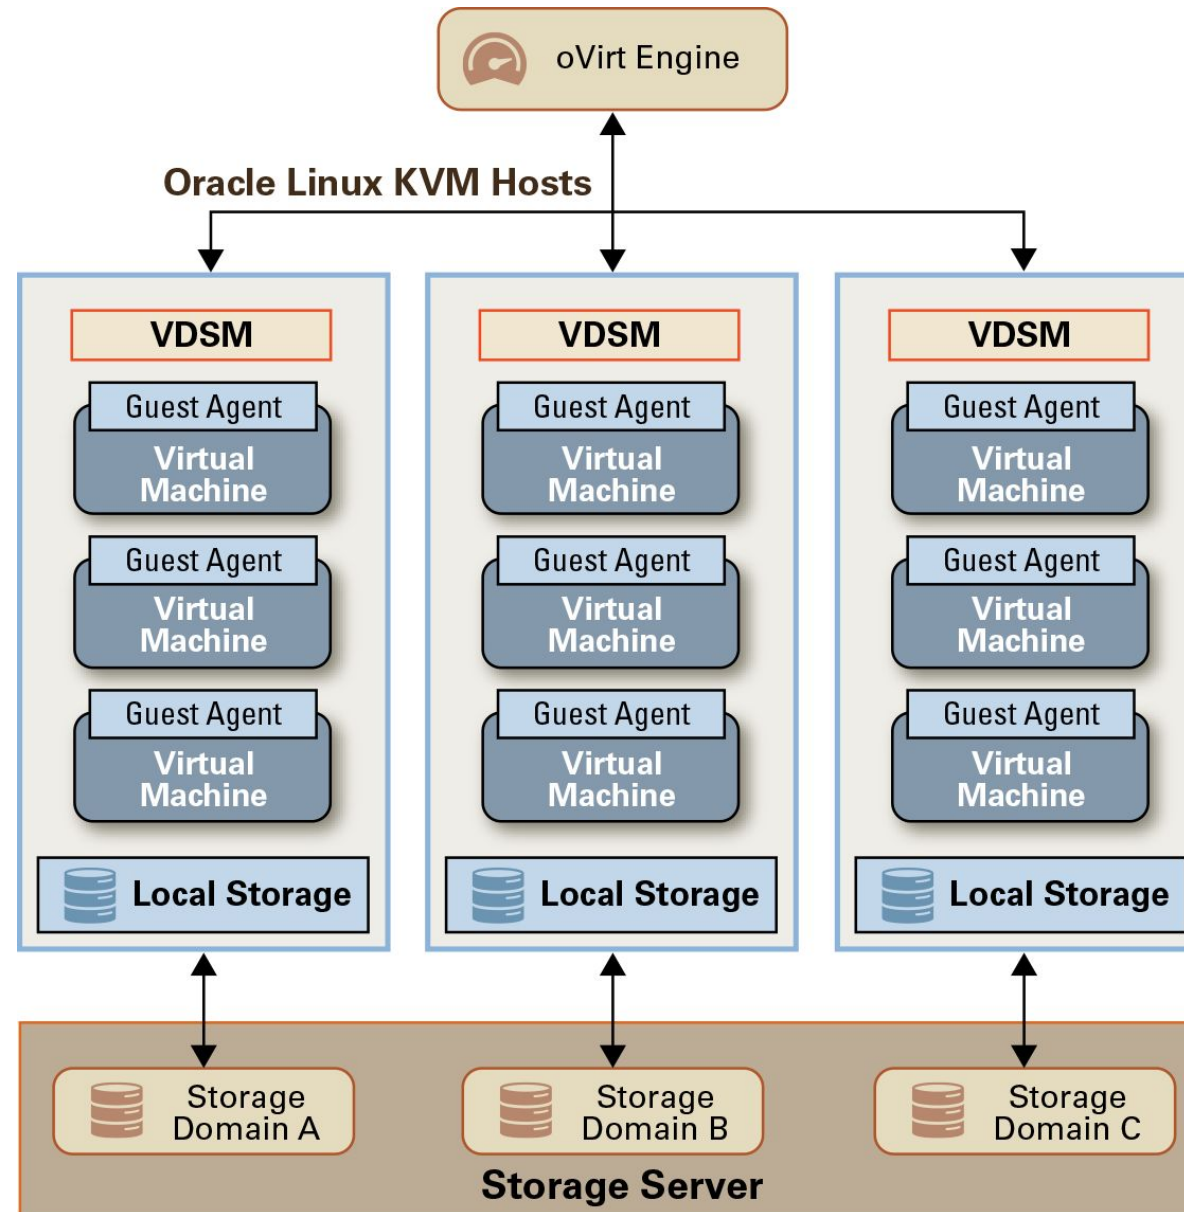

OpenShift

1. Application platform available as a managed service in the cloud, on-prem or at the Edge. Plus AI
2. **Integrated:** Kubernetes/containers, Virtual Machines, application platform toolset, security, management.

Oracle

1. Virtualization with KVM. No AI
2. Kubernetes/containers available as a **separate** add-on.

Architecture of Oracle Virtualization

- Based on KVM and Ovirt (basically Red Hat Virtualization RHV)
- Oracle Virtualization is not a Kubevirt solution.

Limitations

- Virtualization only solution.
- No container management capabilities.
- Not an Application Platform

What is the future of oVirt

- Oracle Virtualizations is currently the only productized version of oVirt.
- Oracle have contributed a tiny amount of contributions to Ovirt compared to Red Hat's contributions.
- How will Oracle support oVirt with only ~27 commit contributions, and no contributions from other vendors?

The image shows two screenshots of the GitHub search interface. The top screenshot shows a search for 'org:oVirt redhat' resulting in 79.8k results. The bottom screenshot shows a search for 'org:oVirt oracle' resulting in 27 results. Both screenshots include the GitHub navigation bar with links to Product, Solutions, Open Source, and Pricing. The search filters are set to 'Filter by' and 'oVirt'.

Top Screenshot (Red Hat):

- Search: `org:oVirt redhat`
- Filter by: **Red Hat**
- Results: **79.8k results** (753 ms) in **oVirt**

Bottom Screenshot (Oracle):

- Search: `org:oVirt oracle`
- Filter by: **Oracle**
- Results: **27 results** (676 ms) in **oVirt**

Discussion in 2023 - future of oVirt

- December **2023** proposal that Foreman (upstream Linux Manager) will no longer support oVirt as the community is not healthy.

FOREMAN

Proposal to drop support for oVirt

Community provisioning ovirt

Shimon_Shtein

Core

Dec 2023

The discussion started here: [Switch to 'network' directive instead of ifcfg by ShimShtein · Pull Request #9961 · theforeman/foreman · GitHub](#) ¹¹.

The main argument is that oVirt is not too healthy, and RHV is deprecated.

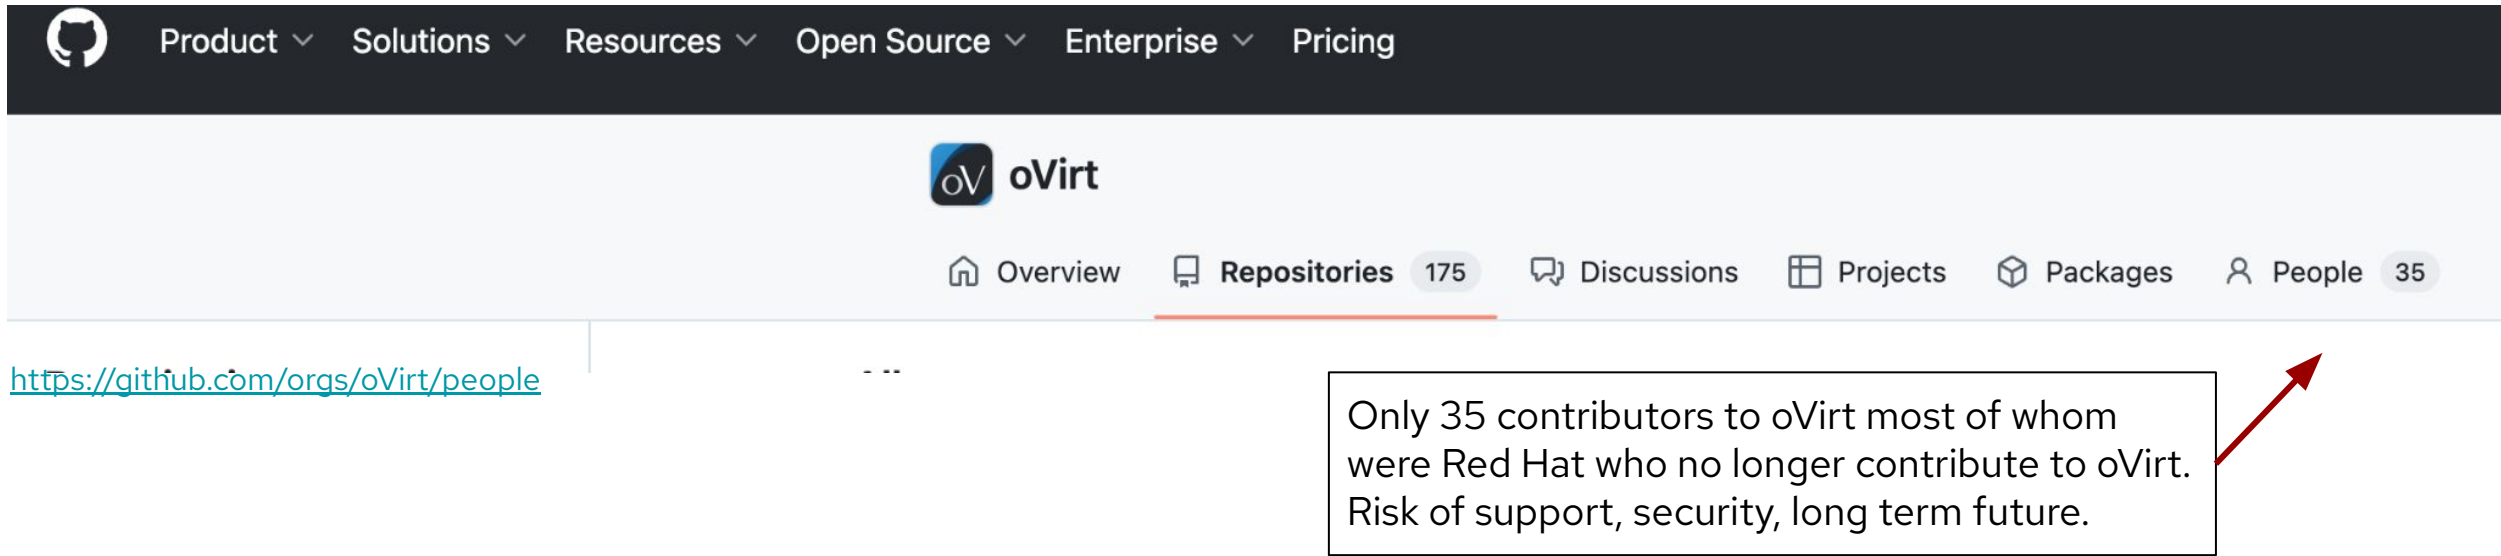

The advantage of this step is to simplify our code base and shrink our maintenance burden.

 RFC: Deprecation and removal of oVirt Compute Resource

<https://community.theforeman.org/t/proposal-to-drop-support-for-ovirt/36324>

Risks of oVirt

The screenshot shows the GitHub repository page for oVirt. The navigation bar includes links for Product, Solutions, Resources, Open Source, Enterprise, and Pricing. The repository page has tabs for Overview, Repositories (175), Discussions, Projects, Packages, and People (35). A red arrow points from a text box to the 'People' tab.

<https://github.com/orgs/oVirt/people>

Only 35 contributors to oVirt most of whom were Red Hat who no longer contribute to oVirt. Risk of support, security, long term future.

Ask your customer:

- The latest oVirt release is based on a Red Hat release in 2023,
 - What is oVirt's roadmap since Red Hat is ceased support for oVirt?
 - How will Oracle maintain & enhance oVirt if their contribution level is so low without Red Hat support ?(prior slide)
- Since 2023 Oracle's only addition to oVirt is FIPS, is this a future proof platform for your data centers?
- Red Hat has ceased contributing to oVirt, Oracle is now the **only** contributor with about 4 engineers.

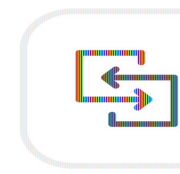

Red Hat has a robust roadmap for OpenShift:

[What's new in Red Hat OpenShift](#)

[What's New in OpenShift 4.18 - Key Updates and New Features](#)

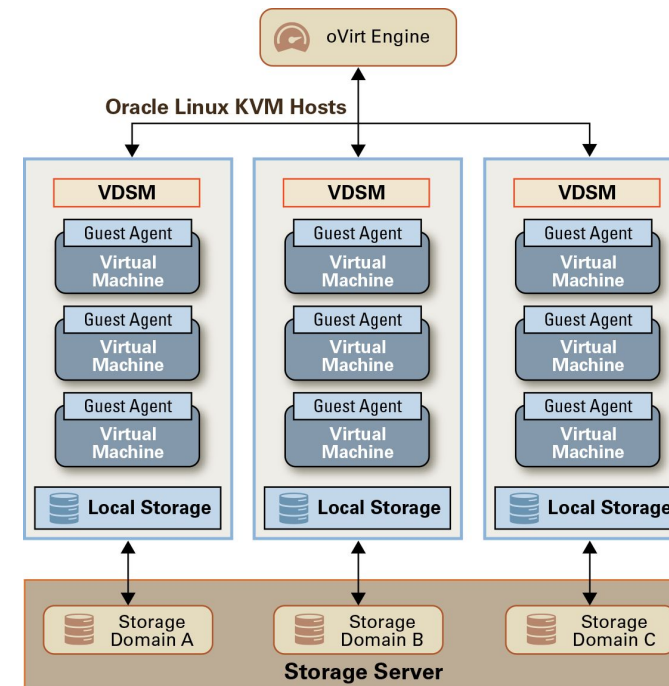

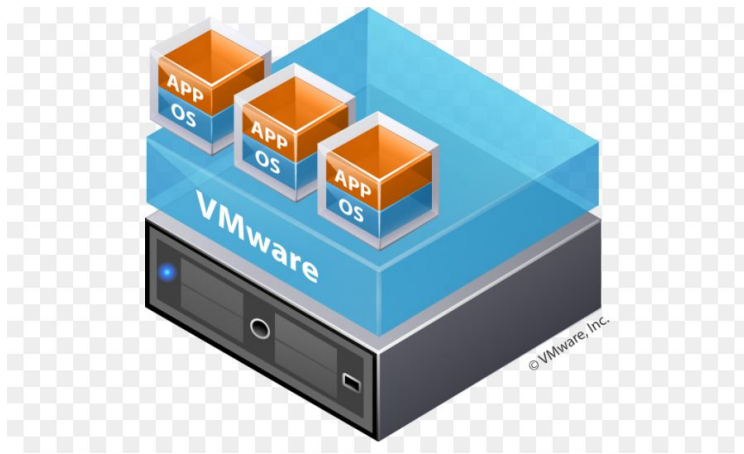

Migration from VMware, Oracle

Oracle

1. Just another virtualization solution Virtualization of Linux hosts.
2. Limited modernization to containers.
3. Virtual machine is the primary workload
4. Kubernetes/containers available as a *separate* add-on.

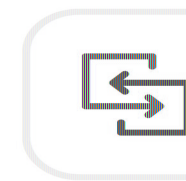

Acquisition + migration cost

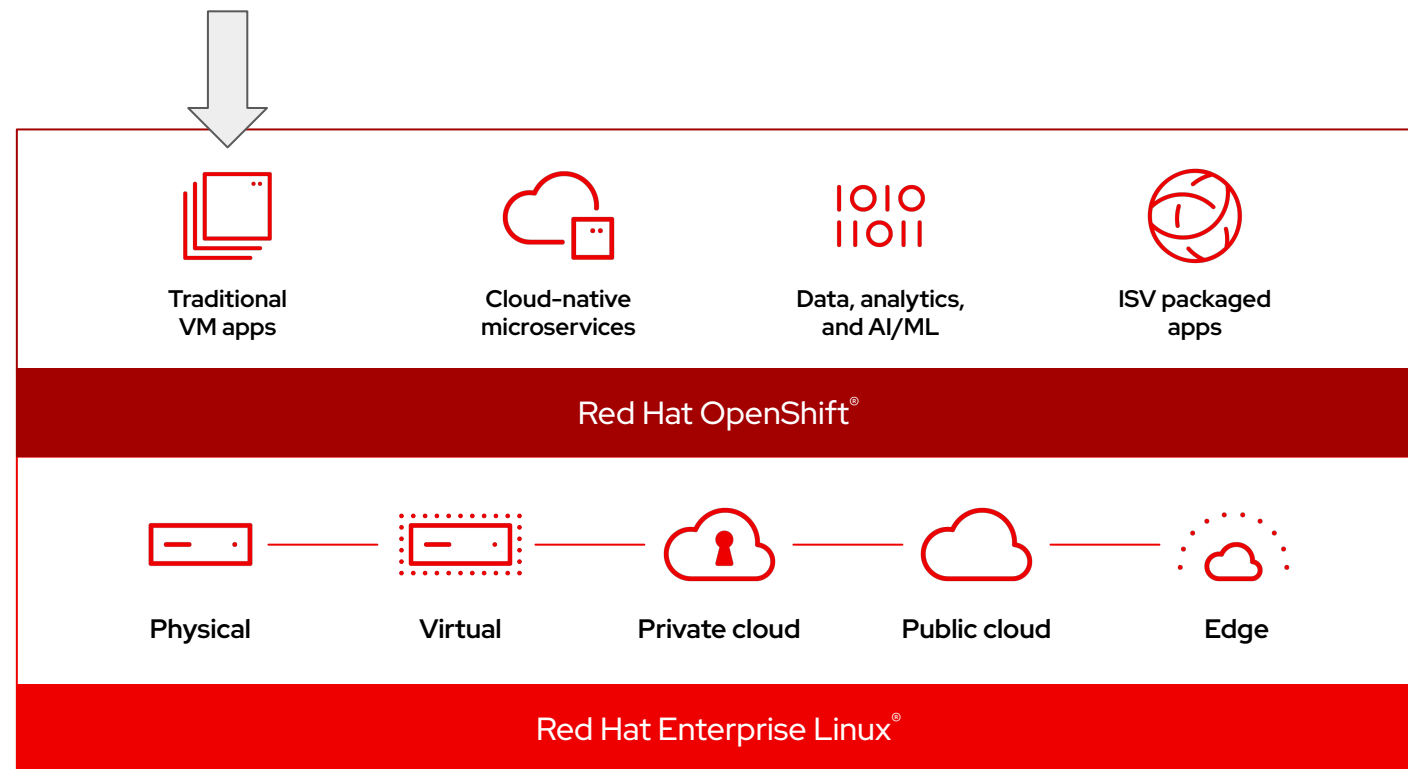

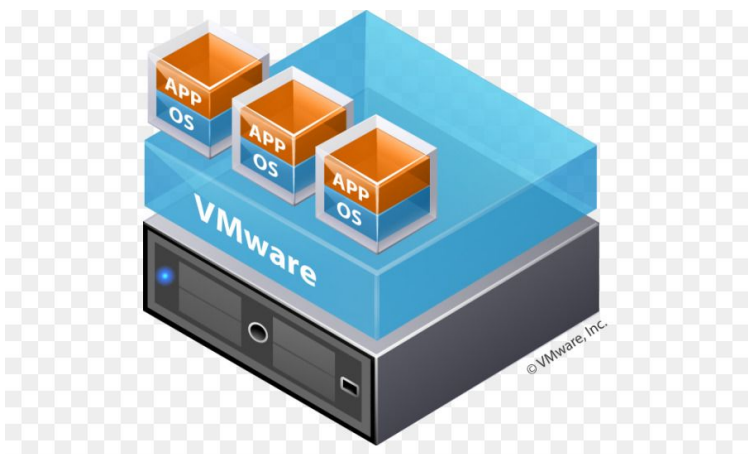

Replacement virtualization platform

Migration from VMware, OpenShift

OpenShift

1. Stepping stone to an Application Platform.
2. Opportunity to modernize to containers.
3. Virtual machines as first class citizens
4. Includes AI platform.

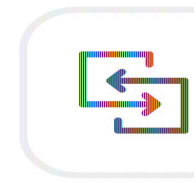

Acquisition + migration cost

Modern app platform with VMs

Migration tools off VMware

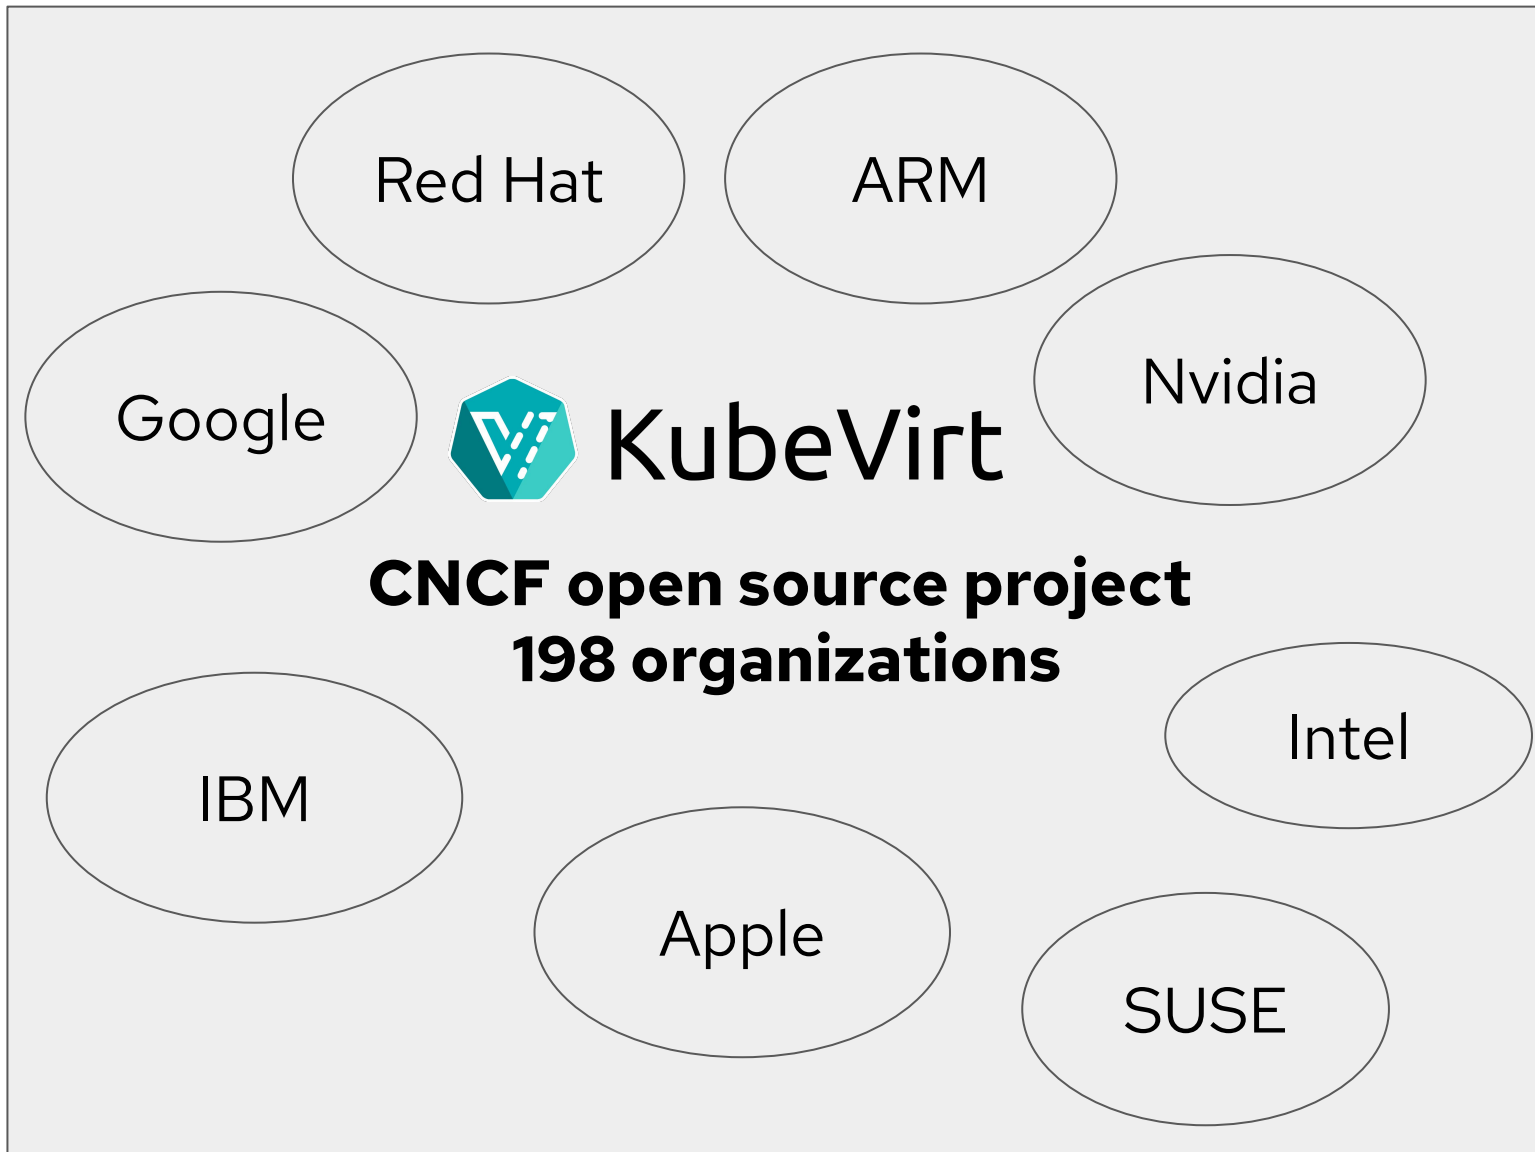

Red Hat	Oracle
<u>MTV</u>	<u>virt-v2v</u>
Partner <u>RiverMeadow</u>	No partner migration
