A note about Cohesity and Veritas

In December of 2024, Cohesity completed the acquisition of Veritas' enterprise protection business. The combined company will build on Cohesity's and Veritas' extremely high customer satisfaction Net Promoter Scores to ensure that there is "No Customer Left Behind" while providing the best product innovation via an engineering team that will be among the largest of any data protection company. More info [HERE](#).

OpenShift Virtualization at Red Hat

Check out the [OpenShift Virtualization Messaging Guide](#) for the most up-to-date information on how to position OpenShift Virtualization.

Elevator pitch

Cohesity DataProtect enables organizations to increase data resiliency and protect Red Hat OpenShift Virtualization VMs and data. The integrated solution addresses the challenges of modern virtualized environments, offering a scalable platform that strengthens data protection, enhances security and streamlines operations. Red Hat OpenShift Virtualization provides a unified, scalable platform for migrating

VMs, enabling modernization and consistent management across hybrid cloud environments. Those VMs are then managed and protected by Cohesity DataProtect, an AI-powered data security platform, to help prevent data loss and ensure rapid recovery in the event of a cyber attack or an outage.

Target audience

- IT Infrastructure managers/directors looking to migrate VMs to OpenShift Virtualization
- IT architects evaluating alternative virtualization solutions

Top level benefits of OpenShift Virtualization with Cohesity DataProtect

- **Improve operational efficiency and scale for data protection.** Save time and simplify data protection in OpenShift Virtualization environments with Cohesity DataProtect.
 - **Centralized Management:** Cohesity and Red Hat OpenShift simplify operations, reducing the complexity and overhead associated with managing disparate systems.
 - **Scalable Architecture:** Both Cohesity and Red Hat OpenShift offer highly scalable architectures, allowing your infrastructure to grow with your business needs without compromising performance or reliability.
 - **Automated Workflows:** Leverage automation to streamline backup and recovery processes, reducing the administrative burden on IT teams and enabling them to focus on more strategic initiatives.
- **Ensure data is properly protected and can be restored quickly.**
 - **Ransomware Protection:** Cohesity's multilayered security architecture, advanced ransomware detection, and immutable backups ensure that VMs and containers are safeguarded against cyber threats.
 - **Compliance and Governance:** Promote compliance with industry regulations and internal governance policies through robust reporting, auditing, and data retention capabilities (e.g., Write Once Read Many (WORM) and legal hold capabilities).
 - *After the initial release, we will expand the integration capabilities to include instant mass restore functionality to ensure rapid recovery of data.*
- **Consistent data management and protection that works across environments.**
 - **Optimized Performance:** Maximize the performance of your virtualized environments with Cohesity's efficient data management capabilities and Red Hat OpenShift's container orchestration.
 - **Unified Protection:** Cohesity DataProtect offers seamless, end-to-end backup and recovery for virtual machines and containerized applications running on Red Hat OpenShift Virtualization, ensuring that your critical data is protected.
 - *After the initial release, we will expand the integration capabilities to include hybrid and multi-cloud support.*

Competitive differentiators

Confidential: Red Hat associate and NDA partner use only.
No further distribution.

Differentiators against:

- Commvault: Cohesity DataProtect provides superior cyber security capabilities, including Cyber Vaulting, Data Resiliency and Zero Trust, ease of management, and reduced storage.
- Rubrik: our unique tech that enables recovery at scale, advanced ransomware recovery, our Data Security Alliance, Cohesity Gaia, stronger cyber vaulting product.
- Veeam: superior cyber security capabilities, including Cyber Vaulting, Data Resiliency and Zero Trust, ease of management, reduced storage, instant mass restore.

Taglines

This section will contain a 25, 50, and 100 word tagline that describes the collaboration between Red Hat and the ISV, as well as touch on high level customer benefits.

Tagline

Data resiliency from containers to VMs

25 word description

Data resiliency for virtualized environments with a scalable solution that enhances security, strengthens data protection and streamlines operations with Red Hat OpenShift Virtualization and Cohesity DataProtect.

50 word description

Increase data resiliency in modern virtualized environments. Together, Red Hat OpenShift Virtualization and Cohesity DataProtect provide an integrated solution that addresses the challenges of modern virtualized environments, offering a scalable platform that strengthens data protection, enhances security and streamlines operations.
